

# Concluding remarks

- **Congratulations to all collaborating Institutes**
- **Welcome to new partners (NorthWest University, Finnish ind.)**
- **Excellent progress on all parts:**
  - Specification, design, construction, installation and beam tests
- **Excellent results already achieved**
  - Feasibility demonstration of frequency multiplication at low intensity
  - Injector commissioning with beam
  - demonstration of fully loaded acceleration with extremely high efficiency,
- **Strong support from Management for a demonstration of the CLIC technology before 2009**
- **Challenging objectives and tight schedule,**
- **More collaborations (with resources) welcome**

# Concluding remarks

## News added after the meeting:

The CERN management considers the possibility of a crash programme for CTF3 to address all 5 CLIC technology related key issues identified by LC technical review:

3 for feasibility demonstration (R1)

2 to finalize design choices (R2)
